LAMP 2CSDE69 INNOVATIVE ASSIGNEMENT DONATION MANAGEMENT

19BCE252 Jainish Shah

19BCE254 Neel Shah

19BCE269 Stuti Patel

FUCTIONALITIES

To design a website that provides a service to make sure that the needy people get all the necessary things from the donor.

We as admin provides the interface that connects the needy people and other NGO's and people that donates their belongings to the other people using php Concepts and functionalities.

ACTORS

We Have Three Actors In Our Project :

I. Donor.
II. NGO'S/Organisations.
III. Admin.

Donor

Donor(User) Can make a Request for donating items of their wish anytime from anywhere.

Then This Request will be redirected to the oraganisations/NGO's Interface to give them chance to accept the request.

While Making the request the page when will ask the donor to enable their location.

For Taking the location Of the User Device We have Used the implementation Of a **Restful API** Of Google Maps.

So, Organisation can Track the location Of The Donor and can Collect the recievables.

ORGANISATIONS /NGO:

First Organisations Have to register On the website with the necessary validations.

For the authentication and validations Of the organisations we have kept 2 way verification.

The Organisation will be able to see the request of the donations however on their preference and availability they will accept the request and will fulfil them by delivering the donations to the needy people.

On successfully completion of the delivery cycle the organisation will also be able to see their all past orders they had provided service for.

Admin:

Admin Can manage all the activities going through the website i.e he can manage the donor, organisation/NGO's Profile if found something malicious we can take necessary actions.

Admin can also monitor the different organisations profile and can rank them on the basis of their successful deliveries and provide rewards on basis of that.

Admin can also monitor the donor's profile in the same way and rank them on the basis of their maximum donations made and the services provided to the city and provide rewards on basis of that.

FUNCTIONALITIES USED FOR IMPLEMENTING PROJECT

Session/Cookies : To store the information of the donor/organisation whosoever has login at the time and can keep a track on their activities during a particular session.

It also has been used to display the name of the user who had login the system at that time using the session and also we make sure to expire the particular session in 30 mins so that the user's profile can't be compromised at some extent.

Api : It is used to fetch the location of the donor so that the organisation can get the map of the particular donor and can reach there easily.

Smtp Protocol : It had been used for the verification of different profiles of organisations and donor to make sure no malicious user can enter the service.

However some other functionalities of the php, javascript and AngularJs are also has been implemented.
